### Research Assistant, University of Tennessee

June 2021 – July 2022

#### RESEARCH

### Research on the trace element partitioning between apatite and silicate melts

Apr 2022 – Present

- Expanded the dataset of partition coefficients between apatite and silicate melt through piston cylinder experiments
- Conducted a series of experiments with constant initial composition but different metal buffers to characterize the Eu anomaly of apatite under different oxygen fugacities
- Built predictive models to calculate the partition coefficients of trace elements between apatite and silicate melts

### Research on the Eu anomalies in lunar plagioclase

Sep 2020 – Apr 2022

- Compiled published crystallization sequences and cumulate products of the lunar magma ocean
- Numerical modeled the trace element abundances of crystallized plagioclase, and tested the reasons of Eu anomalies by subsolidus reequilibration and KREEP addition
- Proposed a post-LMO model to explain the petrogenesis of lunar anorthosites and to reconcile the trace elements, isotopic evidence, and the overlap in ages of Mg-suite, KREEP basalt, and ferroan anorthosites

## **Laboratory Work and Visiting in UT Dallas**

Jul 2019 - Sep 2019

 Worked in the Global Magmatic and Tectonic Research Laboratory with Dr. Robert Stern at UT Dallas on a project aims at determining the petrogenesis of all the Early Cretaceous adakites in China

#### Research on Petrogenesis of Early Cretaceous Adakites in Northeast China Oct 2018 – Apr 2019

- Aimed at figuring out the controversial tectonic settings in NE China by confirming the petrogenesis of the large-scale Early Cretaceous adakitic rocks
- Compiled the temporal and spatial distribution as well as the major elements, trace elements, and Sr-Nd, Lu-Hf isotopic data of the Early Cretaceous adakites
- Proposed a convergent bidirectional subduction model to explain the tectonic settings
